                                                                                                                                                                                                                                                                                                                              9
         The invention relates to a method for producing a high mannose glycoprotein. The method comprises: introducing and expressing a polynucleotide encoding a glycoprotein into a mammalian cell; culturing the cell in the presence of a lectin to obtain a lectin resistant cell; isolating the cell; culturing the cell in the presence of deoxymannojirimycin and kifunensine to inhibit glycopylation of the glycoprotein; and collecting the glycoprotein. The invention is useful gene therapy. The method is useful for producing a high mannose glycoprotein in a complex carbohydrate deficient cell for treating lysosomal storage disease. The present sequence is human N-acetylglucosamine-1 (GlcNAc)-phosphotransferase beta subunit precursor
                                                                                                                                                                                                                                                                                                                                                       EDMOFAFSYFYYLMSAVQPLNISQVFDEVDTDQSGVLSDREIRTLATRIHELPLSLQDLT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           having reduced complex carbohydrates by culturing the lectin resistant having reduced complex carbohydrates by culturing the lectin resistant ammunalian cell expressing the glycoprotein. The method is useful for producing a glycoprotein with reduced complex carbohydrates for treating lysosomal storage disease. The present invention is also useful in gene therapy. The present sequence is human N-acetylglucosamine-1 (GlcNAc)-phosphotransferase beta subunit precursor protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to nucleic acid-associated proteins (NAAP) and nucleic acids. The nucleic acid and amino acid sequences are useful for diagnosing, treating and preventing cell proliferative e.g. arteriosclerosis, atherosclerosis, lymphoma or cancers), neurological (e.g. epilepsy, Alzheiner's disease or stroke), developmental, and autoimmune disorders (e.g. AIDS, allergies, or anaemia) or infections

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1049 NKYRFEIMGEEIAPKMIRTNVSHVVGQLDDIRKNPRKFVCLNDNIDHNHKDAQTVKAVL 1108
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to nucleic acid-associated proteins (NAAP) and nucleic acids. The nucleic acid and amino acid sequences are useful for diagnosing, treating and preventing cell proliferative e.g. arteriosclerosis, lymphoma or cancers), neurological (e.g. epilepsy, Alzheimer's disease or stroke), developmental, and autoimmune disorders (e.g. AIDS, allergies, or anaemia) or infections (e.g. malaria, or leishmania), as well as in assessing the effects of exogenous compound on the expression of nucleic acid and amino acid sequences of nucleic acid-associated proteins. The invention is useful in gene therapy. The present sequence is human NAAP-13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240

                                                 The invention relates to a novel isolated human N-acetylglucosamine-1-phosphortranferases (il.) and phosphoredieter alpha-discharases (id.) and phosphoredieter alpha-discharases (in.) and phosphodiester alpha-detylglucosaminidase) (II). The protein of the invention has rephrotropic activity, and may be useful in enzyme replacement therapy. A protein of the invention (I), is useful for preparing a phosphorylated lysosomal hydrolase. The phosphorylated hydrolase comprising a terminal mannose-6-phosphate, is useful for treating a patient suffering from a lysosomal storage disease. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EDMQFAFSYFYYLMSAVQPLNISQVFHEVDTDQSGVLSDREIRTLATRIHDLPLSLQDLT

                                                                                                                                                                                                                                               ò
                                                                                                The invention relates to a method of phosphorylating a protein comprising contacting the protein with a soluble GlcNAc-phosphotransferase (UDP-N-acetylglucosamine) and producing a phosphorylated protein. The method is useful for treating a patient suffering from a lysosomal storage disease e.g. Fabry's disease. The present sequence represents the amino acid sequence of a GlcNAc-phosphotransferase associated protein.

The invention relates to a method for producing a high mannose glycoprotein. The method comprises: introducing and expressing a plycoprotein into a mammalian cell; culturing the cell in the presence of a lectin to obtain a lectin resistant cell; isolating the cell; culturing the cell in the presence of a lectin to obtain a lectin resistant cell; isolating the cell; culturing the cell in the presence of decoymentojiriwyoin and kifunensine to inhibit glycosylation of the glycoprotein; and collecting the glycoprotein. The invention is useful in gene therapy. The method is useful for producing a high mannose lycoprotein in a complex carbohydrate deficient cell for treating lysosomal storage disease. The present sequence is mouse protein used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180

                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method of phosphorylating a protein comprising contacting the protein with a soluble GlcNAc-phosphotransferase (UDP-N-acetylglucosamine) and producing a phosphorylated protein. The method is useful for treating a patient suffering from a lysosomal storage disease e.g. Fabry's disease. The present sequence represents the amino acid sequence of soluble human GlcNAc-phosphotransferase.
                                                                                                                                                                                                                                                Phosphorylating a protein for treating a patient suffering from a
lysosomal storage disease e.g. Fabry's disease by contacting the protein
with a soluble GlcNAc-phosphotransferase and producing a phosphorylated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DIFADSLRYVNKILNSKFGFISRKVPAHMPHMIDRIVMQELQDMFPEEFDKTSFHKVRHS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RDFYESMFPIPSQFELPREYRNRFLHWHELQEWRAYRDKLKFWTHCVLATLIIFTIFSFF 300
                                                                                                                                                                                                                                                                                   The present invention provides a method of producing a glycoprotein having reduced complex carbohydrates by culturing the lectin resistant mammalian cell expressing the glycoprotein. The method is useful for producing a glycoprotein with reduced complex carbohydrates for treating lysosomal storage disease. The present invention is also useful in gene therapy. The present sequence is mouse protein used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

                                                                                                                                                                                                                                                  Producing a glycoprotein with reduced complex carbohydrates by culturing the lectin resistant mammalian cell expressing the glycoprotein for treating lysosomal storage disease.
                                                                                                                                                                                                                                                                                                                                                      The present invention provides a method of producing a glycoprotein having reduced complex carbohydrates by culturing the lectin resistant mammalian cell expressing the glycoprotein. The method is useful for producing a glycoprotein with reduced complex carbohydrates for treating lysosomal storage disease. The present invention is also useful in gene therapy. The present sequence is N-acetylglucosamine (GlcNAC)-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; NOVX; cardiomyopathy; atherosclerosis; hypertension; congenital heart defect; pulmonary stenosis; scleroderms; obsity; metabolic disturbance; obesity; transplantation; adrenoleukodystrophy; congenital adrenal hyperplasia; prostate cancer; diabetes; metabolic discorder; heoplasm; adenocarcinoma; fertility; haemophilia; graft versus host disease; AlDS; bronchial asthma; Crohn's disease; multiple sclerosis; infectious disease; anorexia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1099 NKYRFEIMGEBEIAFKMIRTNVSHVVGQLDDIRKNPRKFVCLNDNIDHNHKDAQIVKAVL 1158
                                                                                                                                                                                                                                                                                                                         The invention relates to a method for producing a high mannose glycoprotein. The method comprises: introducing and expressing a polymucleotide encoding a glycoprotein into a mammalian cell; culturing the cell in the presence of a lectin to obtain a lectin resistant cell; isolating the cell; culturing the cell in the presence of decoymannojirinycin and kitunensine to inhibit glycosylation of the glycoprotein, and collecting the glycoprotein. The invention is useful in gene therapy. The method is useful for producing a high mannose alycoprotein in a complex carbohydrate deficient cell for treating lysosomal storage disease. The present sequence is N-acetylglucosamine-1 (GICNAc)-phosphotransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EDMQFAFSYFYYLMSAVQPLNISQVFDEVDTDQSGVLSDREIRTLATRIHELPLSLQDLT 1038

```

The invention relates to a new isolated polypeptide comprising an amino acid sequence selected from 17 fully defined human NOVX sequences (even SEQ ID NOS between Ab03970 and Ab039802), a mature form of the NOVX main acid residue in the variant differs in no more than 15% of the amino acid residue in the variant differs in no more than 15% of the amino acid residue in the variant differs in no more than 15% of the amino acid residue of NOVX. Also included are an isolated nucleic acid (NA) molecule (Comprising a nucleic acid sequence encoding a NOVX polypeptide above (Codd SEQ ID NOS between Ab039769 and Ab039801), a nucleic acid fragment of NOVX NA), a vector comprising NOVX NA, a cell comprising the vector, an antibody that immunospecifically binds to NOVX, a method of determining the presence or amount of NOVX or NOVX, a method for determining the activity of NOVX, a method of resolution to a modulating the activity of NOVX, a method of treating an agent that binds to NOVX, associated disorder, a method for screening for a modulator of a cotivity or of latency or predisposition to a NOVX-associated disorder, a method for determining the presence of or predisposition to a disease subject and a method of treating a pathological state in a mammal by administering NOVX or an antibody that binds to NOVX. The NOVX associated disorder. The NOVX polypeptides and nucleic acid or antibody is useful in the manufacture of a medicament for treating a syndrome associated with a human disease or a NOVX-associated disorder. The NOVX polypeptides and nucleic acid or antibody or treating pathologies, diseases encoding them are useful for diagnosing or treating pathologies, diseases New NOVX polypeptides and nucleic acids, useful for diagnosing or treating e.g. cardiomyopathy, atherosclerosis, hypertension, scleroderma, obesity, prostate cancer, AIDS, bronchial asthma, Crohn's disease, or Shimkets RA, Padigaru M, Kekuda R, Spytek KA; Tu, Malyankar UM, Wasserman SM, Edinger SR; Sr E, Komuves L; Disclosure; SEQ ID NO 90; 215pp; English. , 2001US-0285609P. ; 2001US-0285748P. ; 2001US-028628P. ; 2001US-0286292P. ; 2001US-0288334P. ; 2001US-0288334P. 11-APR-2002; 2002US-00120801

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            244
                  atherosclerosis, hypertension, congenital heart defects, pulmonary stenoats, scleroderma, obesity, metabolic disturbances associated with obesity, transplantation, adrenoleukodystrophy, congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic disorders, neoplasm, adenocarcinoma, fertility, haemophilia, graft versus host disease, horonial asthma, Crohn's disease, multiple sclerosis, infectious disease, anorexia, neurodegenerative disorders (e.g. Alzhaimer's disease, reparkinson's disease), immune disorders, haematopoietic disorders, dyslipidaemias, and wasting disorders, haematopoietic disorders. The polypeptides can be used as immunogens to produce antibodies and as vaccines. The sequences may further be used in chromosome mapping, identifying individual from minute biological samples (tissue typing), and in forensic identification of a biological samples (tissue typing), and in forensic identification of a biological samples (tissue typing), sequence is a protein showing sequence similarity to a NOVX protein.

Guo X, Shimkets RA, Padigaru M, Kekuda R, Spytek KA Topper JN, Malyankar UM, Wasserman SM, Edinger SR; Gunther E, Komuves L; Mehraban F, Topper JN, Smithson G, Gunther E,

New NOVX polypeptides and nucleic acids, useful for diagnosing or treating e.g. cardiomyopathy, atherosclerosis, hypertension, scleroderma, obesity, prostate cancer, AIDS, bronchial asthma, Crohn's disease, or multiple sclerosis.

Disclosure; SEQ ID NO 87; 215pp; English.

The invention relates to a new isolated polypeptide comprising an amino acid sequence selected from 17 fully defined human NOWX sequences (even SCO ID NGS between ADG39770 and ADG39802), a mature form of the NOWX amino acid or a variant differs in no more than 15% of the amino acid residue in the variant differs in no more than 15% of the amino acid residue in the variant differs in no more than 15% of the amino acid residue in NOWX. Also included are an isolated nucleic acid (NAN) molecule comprising nucleic acid sequence encoding a NOWX polypeptide above (cod SEO ID NOS between ADG3960), a nucleic acid fragment of NOWX has a nucleic acid sequence encoding a NOWX polypeptide and a complement of NOWX has a lessence or amount of NOWX and not acid fargment of NOWX has a lessence or amount of NOWX, a method for determining che presence or amount of NOWX, a method for identifying an agent that bids to NOWX, a method for identifying an agent that be expression or activity of NOWX, a method for identifying an agent that be expression or activity of NOWX, a method for identifying an agent that be expression or activity of NOWX, a method for adentifying an agent that be expression or activity of NOWX, a method of treating or preventing a NOWX associated disorder, a method for screening for a modulator of a speciated with altered levels of NOWX or NOWX NA in a first mammal an unbject and a method of treating a pathological state in a mammal by administering NOWX or an antibody that binds to NOWX. The NOWX collappoinde, nucleic acid or antibody is useful in the manufacture of a medicament for treating a syndrome associated with a human disease or conditions associated with NOWX sequences, including cated with a meaning a nording them are useful for diagnosing or treating pathologies, diseases or conditions associated with nowX sequences, including cated with hyperplasia, prostate cancer. Industrial asthma, Coolby and sociated with a human disease, and associated of discorders, methodical asthma, coolby and sociated with

Sequence 2, Application US/09986552

Patent No. 6670165

GENERAL INFORMATION:
APPLICANT: CANFIELD, William
APPLICANT: CANFIELD, William
TITLE OF INVENTION: METHODS FOR PRODUCING HIGHLY PHOSPHORYLATED LYSOSOMAL HYDROLASES

FILE REPRENEUCE: 215.08091037D1V
CURRENT APPLICATION NUMBER: US/09/986,552

CURRENT APPLICATION NUMBER: US/09/986,552

PRIOR APPLICATION NUMBER: 09/635,872

PRIOR APPLICATION NUMBER: 60/153,831

PRIOR FILING DATE: 2000-08-10

PRIOR FILING DATE: 1999-09-14

NUMBER: OF SEQ ID NOS: 52

SOFTWARE: Patentin version 3.1

SEQ ID NO 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 EDMOPAFSYFYYLMSAVQPLNISQVFDEVDTDQSGVLSDREIRTLATRIHELPLSLQDLT 120

Sequence 13, Application US/09636596C
Patent No. 6770468
GENERAL INFORMATION:
APPLICATY: CANFIELD, WILLIAM
TITLE OF INVENTION: PHOSPHODIESTER ALPHA-GLCNACase OF THE LYSOSOWAL TARGETING PATHWAY
FILE REFERENCE: 10929-0001-77
CURRENT APPLICATION NUMBER: US/09/636,596C
CURRENT FILING DATE: 2000-008-10
PRIOR FILING DATE: 1999-09-14
NUMBER OF SEQ ID NOS: 52
SOFTWARE PATENTIN VETSION 3.0
SEQ ID NO 13
LENGTH: 502
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 EDMQFARSYFYYLMSAVQPLNISQVFDEVDTDQSGVLSDREIRTLATRIHELPLSLQDLT 120

US-10-024-197-10

US-10-024-197-10

Sequence 10, Application US/10024197

Publication No. US20030133924A1

GENERAL INFORMATION:

APPLICANT: CANFIELD, William

TITLE OF INVENTION: HIGHLY PHOSPHORYLATED ACID BETA-GLUCOCEREBROSIDASE AND METHODS (FILLE REFERENCE: 209794USO)

CURRENT APPLICANTION: US/10/024,197

CURRENT FILING DATE: 2001-12-21

NUMBER OF SEQ ID NOS: 27

SEQ ID NOS: 27

SEQ ID NO 100

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GTP-binding protein - cherry salmon
GTP-binding protein - cherry salmon
GTP-binding protein - cherry salmon
C;Species: Oncorbymchus masou (cherry salmon)
C;Gpecies: Oncorbymchus masou (cherry salmon)
C;Accession: T00394
C;Accession: T00394
C;Accession: T00394
C;Accession: T00394
A;Atitle: Isolation of a cDNA for a novel 120-kDa GTP-binding protein expressed in motor
A;Atitle: Isolation of a cDNA for a novel 120-kDa GTP-binding protein expressed in motor
A;Accession: T00394
A;Accession: T00394
A;Molecule type: mRNA
A;Molecule type: mRNA
A;Molecule type: mRNA

C, Species and Comported 1 - Guillardia theta nucleomorph
C, Species and Computed 2 - Guillardia theta nucleomorph
C, Species and Computed 3 - Guillardia theta the vestigial nucleus of a cukaryotic endosymbiont
A; Note: a nucleomorph is the vestigial nucleus of a cukaryotic endosymbiont

immediate early protein - Bombyx mori nuclear polyhedrosis virus
() Species: Bombyx mori nuclear polyhedrosis virus, BmSNPV
() Date: 22-Nov-1993 #sequence_revision 01-Dec-1995 #text_change 09-Jul-2004
() Accession: $20596
() Accession: $20596
() Accession: $20596
() Aritle: Nucleotide sequence of a transactivating Bombyx mori nuclear polyhedrosis virual Areference number: $20596
() MJD:92162753; PMID:1536885

metryl-accepting chemotaxis protein (mcp-3) homolog - Lyme disease spirochete C.Species: Borrelia burgdorferi (Lyme disease spirochete)
C.Date: 13-Feb-1998 #sequence_revision 13-Feb-1998 #text_change 09-Jul-2004
C.Date: Daylon, B. Casjens, S.; Huang, W.M.; Sutton, G.G.; Clayton, R.; Lathigra, R.; White son, D.; Peterson, J.; Kerlavage, A.R.; Quackenbush, J.; Salzberg, S.; Hanson, M.; Vugt, S. Bowman, C.; Garland, S.; Fujii, C.; Cotton, M.D.; Horst, K.; Roberts, K.; Hatch, B. A.Authors: Smith, H.O.; Venter, J.C.
A.Title: Genomic sequence of a Lyme disease spirochaete, Borrelia burgdorferi.
A.Reference number: A70100; MUID:98065943; PMID:9403685
A.Accession: D70174
A.Status: preliminary; nucleic acid sequence not shown; translation not shown A;Nolecule Type: DNA
A.Residues: 1-735 - KLE>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Insequence analysis of the 33 kb long region between ORC5 and SU11 from "Sequence analysis of the 33 kb long region between ORC5 and SU11 from the left arm of chromosome XIV from Saccharcmyces cerevisiae.";
Yeast 13:849-860(1997).

-i- FUNCTION: Involved in DNA double-strand break repair (DSBR). The rad50/mre11 complex possesses single-strand endonuclease activity and ATP-dependent double-strand-specific exonuclease activity. Rad50 provides an ATP-dependent control of mre11 by unwinding and/or repositioning DNA ends into the mre11 active site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          55 HKVRHSEDMQFAFSY-FYYLMSAVQPLNISQVFDEVDTDQSGVLSDREIRTLATRIHELP
